

RAA supports ICA Climate Change Roadmap

RAA supports the Insurance Council of Australia (ICA)'s Climate Change Roadmap, which outlines how Australian insurers can reach net zero emissions by 2050.

Released late last year, the **roadmap** provides a pathway for insurers to make substantial emissions reduction by 2030 and achieve net zero across their entire activities by 2050.

RAA Insurance Acting Chief Executive, Tara Page, said RAA is committed to reducing the environmental impact of its operations as it supports South Australia's move to a carbon-free future.

"The impact of climate change in Australia is clear, highlighted by experiences such as the recent River Murray floods which have devastated communities up and down the river," Ms Page said.

"RAA's vision is to make life better for our members and the community, today and tomorrow, and we are committed to addressing the risks and embracing the opportunities climate change presents.

"To do this, we have adopted seven of the 17 United Nations Sustainable Development Goals, including Goal 13 (Climate Action), which we'll use alongside the ICA roadmap to guide our efforts."

RAA Insurance's current focus is on eliminating (by 2030) the emissions generated by our fleet vehicles, as well as emissions indirectly generated by our consumption of energy.

"We will achieve this through electrification of the RAA Insurance fleet vehicles and moving to green power," Ms Page said.

"We are also working towards reducing other emissions indirectly generated from our business, for example from office equipment and the use of paper, and are also pursuing the purchase of carbon credits to offset our emissions.

"We will continue to work closely with the wider insurance industry, and our own supply chain, to really make a difference".
